

Truncus Arteriosus: The Other TA

Wednesday, August 17, 2022

7 p.m. – 8 p.m. EDT

Presenter: Joseph Kay, MD

About the Webinar

Do you know that children and adults who are born with the congenital heart defect (CHD) truncus arteriosus have distinctive characteristics? These features make it unique from a more common CHD, tetralogy of Fallot (TOF). Both CHDs have pulmonary valve problems. Thus, many adult providers without additional CHD training believe patients with truncus arteriosus are the same as those with TOF. You do not want to miss this webinar. Dr. Joseph Kay will talk about the differences and discuss issues that both adult congenital heart disease providers and patients should be aware of. Register today.

About the Presenter

Dr. Joseph Kay is Professor of Pediatrics and Internal Medicine at The University of Colorado School of Medicine and Director of Colorado's Adult and Teen Congenital (CATCH) program, which spans University of Colorado Hospital and Children's Hospital Colorado. After completing a combined Internal medicine/pediatrics residency at the University of Michigan, he completed combined adult and pediatric cardiology fellowships at Duke University and has been at University of Colorado since 2004. He is married with one daughter and too many pets to count.

About the Adult Congenital Heart Association

The Adult Congenital Heart Association (ACHA) is a national not-for-profit organization dedicated to **supporting individuals and families living with congenital heart disease and advancing the care and treatment available to our community.** ACHA empowers the more than nearly 2 million adults with CHD, their families, and the medical community by advancing access to resources and specialized care that improve patient-centered outcomes. For more information about ACHA, contact (888) 921-ACHA or visit www.achaheart.org.
